

OPEN EXCEL USING EXCEL  
PROCESS SCOPE

#### Use Excel File

Excel file \*

{ } "SHOPEE FINAL.xlsx"

Reference as

Excel

☒ Save changes

☒ Create if not exists

Read formatting

Same as project

☐ Template file

INDICATE WHICH EXCEL FILE  
YOU WANT TO USE

#### For Each Excel Row

For each

CurrentRow

In range \*

{ } Excel.Sheet("100")

☒ Has headers

☐ Save after each row

INSERT A FOR LOOP IN THE PROCESS  
TO REPEAT THE PROCESS WHENEVER  
THERE IS STILL DAT IN THE COLUMN  
WHEN THE FOR LOOP READS THE  
EXCEL IT READS IT VERTICALLY

#### Use Browser Chrome: Shopee Seller Center

Browser URL \*

{ } "https://seller.shopee.ph/portal/marketing/vouchers/li"

INDICATING THE WEBSITE  
THAT THE ROBOT WILL INPUT  
THE DATA INTO

#### Click 'Create'

Click type

Single

Mouse button

Left

#### Type Into 'Voucher Name'

Type this

☒ Standard ☐ Secure

{ } CurrentRow.Item("Name").ToString

Empty field before typing

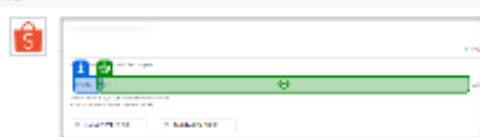

Single line [End, Shift+H]

Click before typing

Single

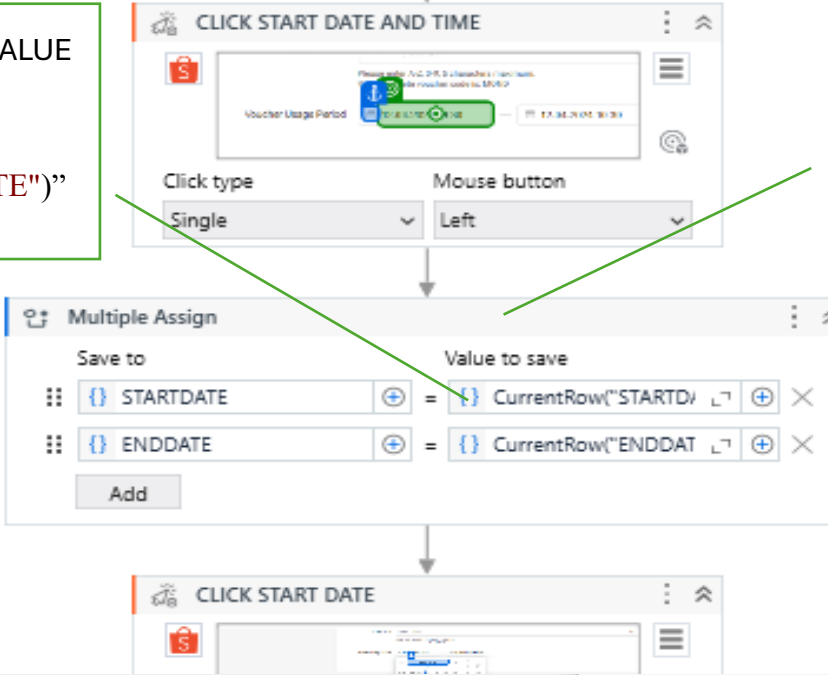

"CLICK" INDICATE WHICH  
BUTTONS THE ROBOT  
SHOULD CLICK HERE WE  
START TO NAVIGATE THE  
WEBSITE AND DO THE  
NESSARRY ACTIONS  
BEFORE HAVING TO INPUT  
DATA

#### Type Into 'VOUCHER CODE'

HERE WE REPLACE THE VALUE OF THE OBJECT THAT WE WANT TO BE CLICKED  
“CurrentRow("STARTDATE")”

USING MULTIPLE ASSIGN TO REPLACE THE VALUE THAT WE WANT TO FOR A CERTAIN VARIABLE THAT WE WANT TO INDICATE AND HAVE IT AND MULTIPLE ASSIGN MUST BE BEFORE THE ACTION THAT WE REPLACED THE VALUE OF IN THIS CASE IT IS BEFORE THE CLICK ACTION.

The screenshot shows a form for creating a voucher. The 'Basic Information' section includes fields for 'Voucher Type' (Shop Voucher), 'Voucher Name' (0/100), 'Voucher Code From Seller' (PILM | INPUT, 0/5), and 'Voucher Usage Period' (27-05-2024 10:48 to 27-05-2024 11:48). A date picker is open, showing a calendar for June 2024. The 'Reward Settings' section includes 'Reward Type' (Shopee Smart Voucher), 'Discount Type | Amount' (30), and 'Minimum Basket Price' (P | ).

The screenshot shows the 'Configuration' section of a tool. It includes a 'Target' configuration area with a 'Strict selector' checkbox checked. The selector is set to '

HERE IS AN EXAMPLE OF HAVING TO REPLACE THE VALUE OF THE INDICATED TARGET BECAUSE WE KNOW THAT DATE IS ALWAYS CHANGING SO HAVING A STATIC VALUE DOESN'T HELP US SO WE WANT TO CHANGE THE VALUE OF THE OBJECT THAT WE WANT TO CLICK

WHEN CHANGING THE VALUE WE MUST DO A SHORT CUT KEY WHICH IS “CTRL + K” AND RENAME THE VALUE AND SET THE VALUE TO 0 SO THAT UIPATH WONT ADD IT UP TO THE CURRENT VALUE
