

Power automate:

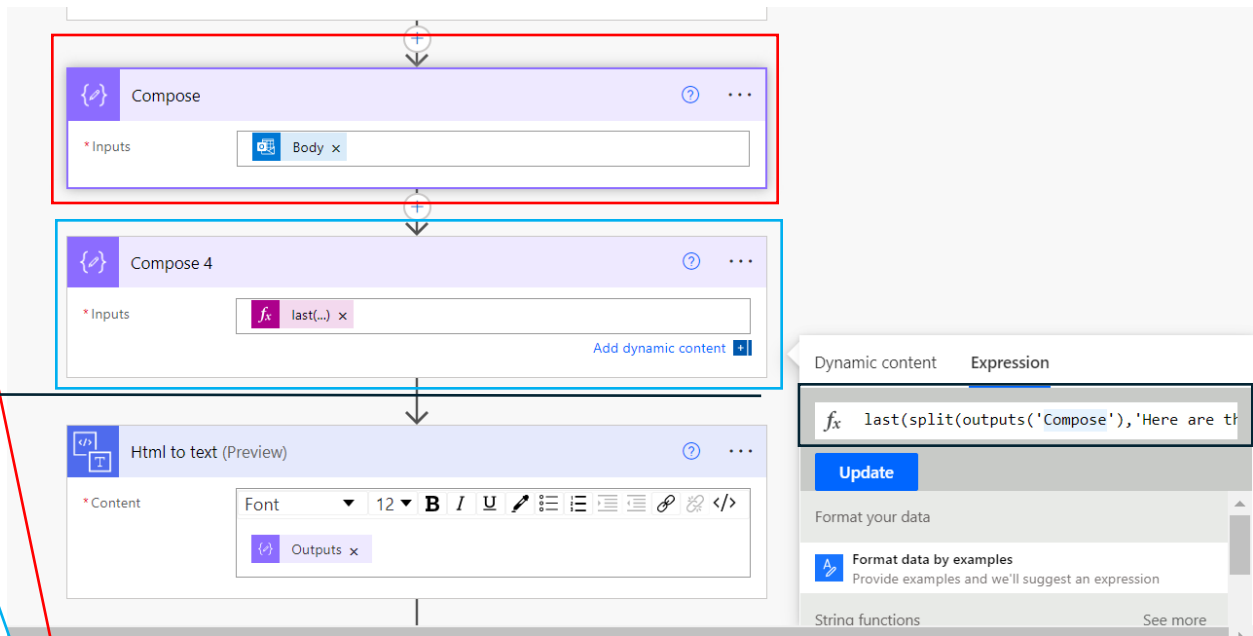

When a new email arrives it breaks it down to the contents that I want and it saves it to google sheet and it automatically updates whenever a new email is sent to me.

The screenshot shows the configuration for the 'When a new email arrives' trigger in Power Automate. The configuration is as follows:

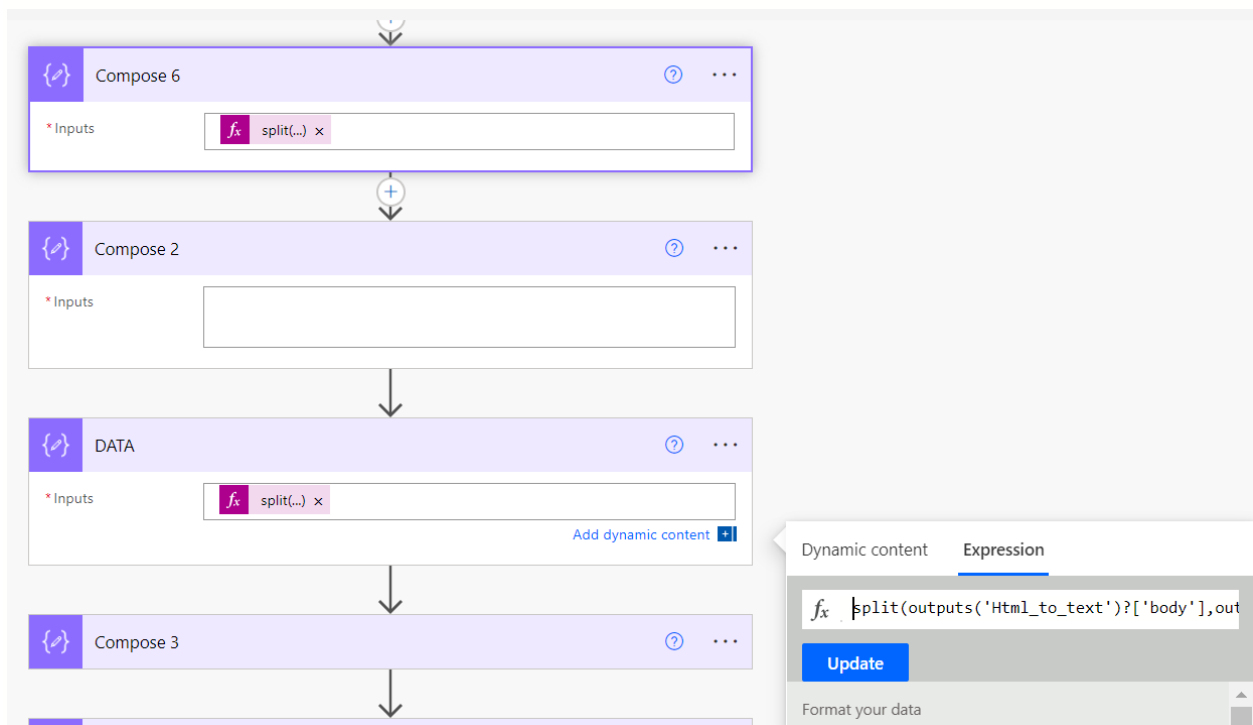

Field	Value
Folder	Topup Trackerrr
To	Recipient email addresses separated by semicolons (If any match, t...
CC	CC recipient email addresses separated by semicolons (If any matc...
To or CC	To or CC recipient email addresses separated by semicolons (If any ...
From	Sender email addresses separated by semicolons (If any match, the...
Include Attachments	Should the response of the trigger include the attachments content. <input type="checkbox"/>
Subject Filter	String to look for in the subject line.
Importance	Importance of the email (Any, High, Normal, Low). <input type="checkbox"/>
Only with Attachments	If set to true, only emails with an attachment will be retrieved. Emails with <input type="checkbox"/>

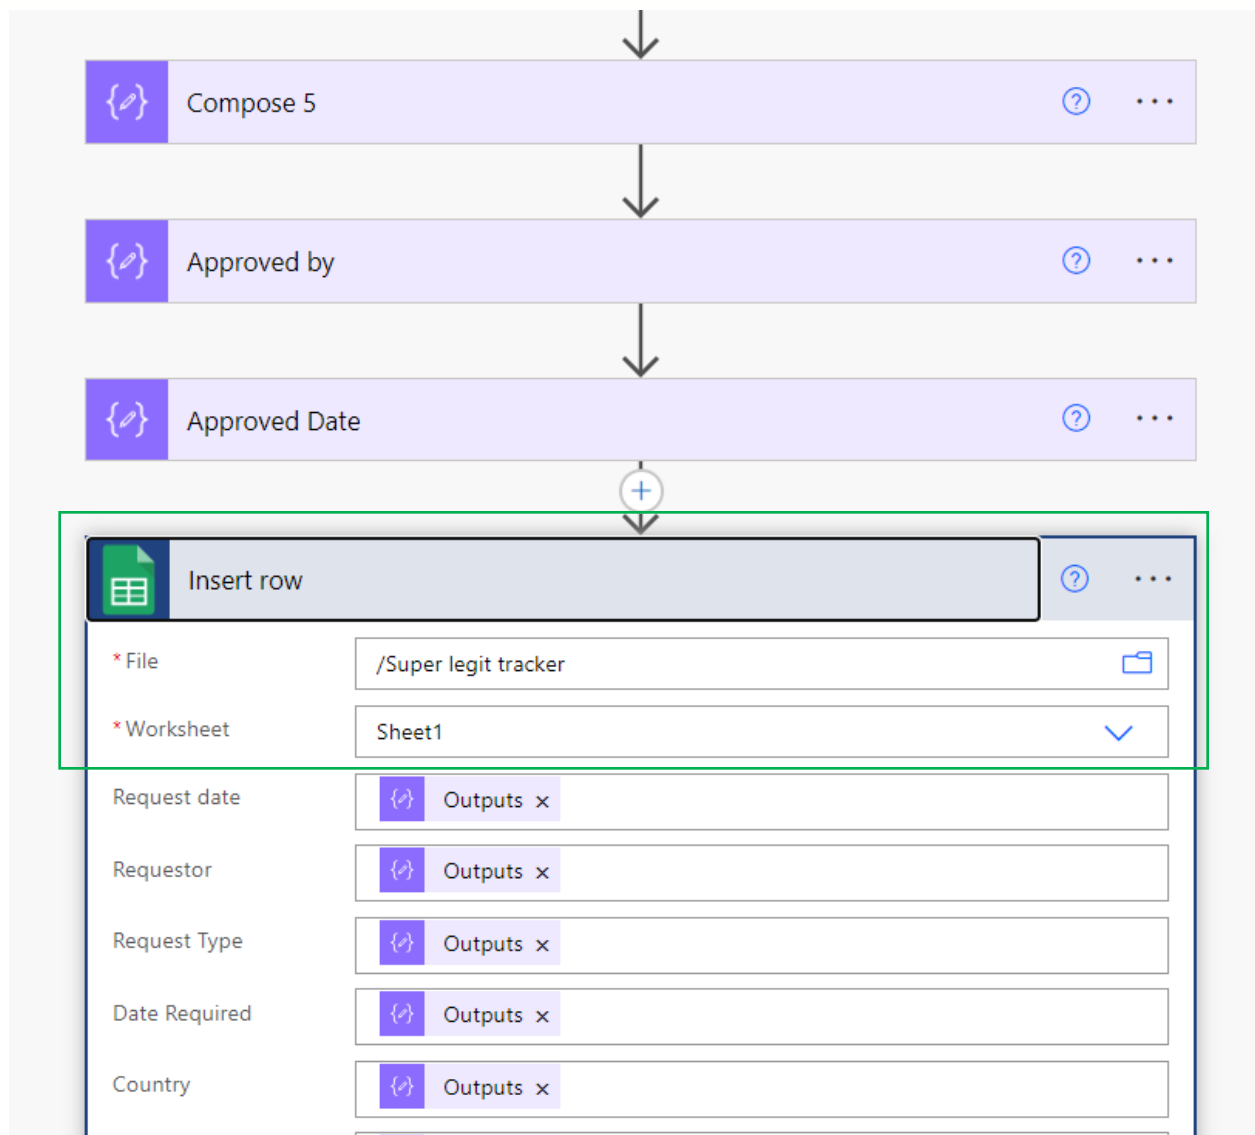

Hide advanced options ☐

This is were the email is stored I organized it in outlook that whenever a specific email is sent to me it will direct to this folder.

- Contain the data in “compose” to only get the content that we want and select the body in which has the data that I want to gather.
- Use a new compose to split the data and input in the expression area the formula that will split and collect the data that you want.
- last(split(outputs('Compose'),'Here are the details')) - here is a sample formula on how to split the email

Connect your power automate to google sheet and configure it to the sheet you want to save it to.
